Software Requirements Specification (SRS)

Project Title

AI-Powered Job Portal with Resume Builder, Mock Interview & Hiring Dashboard

Document Version

1.0

Date

May 11, 2026

Technology Stack

- Frontend: **Next.js with TypeScript**
- Backend: **Node.js with Express.js in JavaScript**
- Database: **MongoDB**

---

1. Introduction

This document defines the complete end-to-end requirements for an AI-powered job portal where job seekers and companies interact on a single platform. The system supports resume building, AI-based resume analysis, mock interviews, job recommendations, hiring workflows, interview scheduling, feedback management, billing, and admin control.

The platform is designed to help:

- Candidates create strong resumes and improve interview performance.
- Companies find better candidates faster.
- Admins manage jobs, users, reports, and platform settings.
- Super Admins track revenue and overall platform activity.

---

2. User Types

2.1 Job Seeker / Candidate

The candidate is the person searching for jobs and applying for roles. The candidate can:

- Register and login.
- Complete resume details.
- Edit resume at any time.
- Run AI-based resume analysis.
- Practice mock interviews.
- Take official mock interviews.
- View recommended jobs.

- Apply for jobs.
- Attend interviews.
- View offer, rejection, or feedback.

2.2 Employer / Company / Hiring Manager

The company user manages recruitment activities. The company can:

- Register as a company.
- Activate Hiring Mode.
- Create company profile.
- Post jobs.
- Review applications.
- Shortlist candidates.
- Schedule interviews.
- Send interview feedback.
- Update interview status.

2.3 Admin

The admin manages platform operations. The admin can:

- Manage users.
- Manage jobs.
- Add jobs manually.
- Import jobs in bulk using CSV.
- View analytics and reports.
- Manage platform settings.

2.4 Super Admin

The Super Admin has full platform-level access. The Super Admin can:

- View all users, companies, jobs, and payments.
- Track revenue.
- Monitor premium subscriptions.
- View detailed analytics.
- Control advanced system settings.

---

3. Login and Registration

3.1 Registration

A new user can register using:

- Email
- Mobile number
- Password
- Role selection such as Candidate, Company, or Admin

After registration:

- OTP verification is sent to email.
- The account is created after verification.
- The user is redirected to the proper dashboard based on role.

3.2 Login

A registered user can login using:

- Email and password
- Continue with Google

3.3 First Login Redirect

After successful login, the system redirects the user to:

- Candidate Dashboard
- Company Dashboard
- Admin Dashboard
- Super Admin Dashboard

3.4 Security

- Passwords are encrypted before storage.
- OTP is required for verification and password recovery.
- Login sessions are protected.
- Failed login attempts are limited.

---

4. Candidate Dashboard and Resume Flow

4.1 Candidate Dashboard

When a candidate logs in, the dashboard displays:

- Resume completion status
- AI analysis score
- Mock interview section
- Recommended jobs

- Application status
- Notifications

If the resume is incomplete, the dashboard shows a **Complete Resume** card.

4.2 Resume Builder

The resume builder works in 7 steps.

Step 1: Personal Information

The candidate enters:

- Full name
- Email
- Mobile number
- Location

Step 2: Education

The candidate enters:

- Degree
- College or university
- Passing year
- Marks or CGPA

Step 3: Work Experience

The candidate enters:

- Company name
- Role
- Duration
- Short bullet points about work

Step 4: Skills

The candidate enters:

- Technical skills
- Soft skills
- Languages

Step 5: Projects

The candidate enters:

- Project name
- Duration

- Tech stack
- Short description

Step 6: Template Style

The candidate selects:

- ATS-friendly style
- Modern style
- Simple style

Step 7: Preview and Download

The candidate can:

- Preview the resume
- Edit the content
- Download the resume as PDF

4.3 AI Resume Analysis

After the resume is completed or uploaded, the system performs AI-based analysis.

The analysis includes:

- ATS compatibility score from 0 to 100
- Keyword match analysis
- Gap analysis
- Formatting check
- Weak bullet point suggestions
- Stronger content recommendations

The system highlights:

- Missing keywords
- Missing sections
- Weak experience descriptions
- Better wording for bullets

4.4 Resume Re-Analysis

If the candidate edits the resume:

- The system allows re-analysis.
- The ATS score is updated.
- Keyword matching is updated.
- New suggestions are generated.

4.5 Resume Limits

- Free users can analyze the resume 3 times per month.
- Premium users can analyze the resume unlimited times.

---

5. AI Mock Interview

5.1 Access Condition

The AI Mock Interview section appears only after the resume is complete.

5.2 Practice Mode

Practice mode is for learning and preparation.

Features:

- Unlimited practice
- No final score saved
- Resume-based questions
- Technical questions
- Behavioral questions
- Instant feedback

5.3 Official Mode

Official mode is the scored version.

Features:

- Final score is saved
- Confidence level is shown
- Used for recommendations
- Used for candidate progress tracking

5.4 Question Categories

The AI can ask:

- Resume questions
- Project questions
- Technical questions
- Behavioral questions
- Experience questions

---

6. Job Recommendations

6.1 Recommendation Logic

After the candidate completes the official mock interview, the system shows recommended jobs.

The recommendation is based on:

- Resume match score
- Mock interview score
- Skill match
- Company rating
- Company response speed

6.2 Job Card Details

Each job card shows:

- Company name
- Company rating
- Job title
- Salary
- Location
- Job type
- Match percentage

6.3 Apply to Job

The candidate can click Apply to send the application.

When the candidate applies:

- Resume is attached automatically.
- Application is saved.
- Company receives notification.
- Candidate sees applied status.

---

7. Company Dashboard and Hiring Mode

7.1 Company Dashboard

The company dashboard displays:

- Company profile
- Job listings
- Applications
- Interview schedule

- Feedback section
- Rating information

7.2 Hiring Mode

The company activates Hiring Mode by entering:

- Company name
- Industry
- Location
- Logo
- Description
- Website
- Contact details

After saving:

- The company becomes active for hiring.
- Jobs can be posted.
- The company becomes visible in the hiring system.

7.3 Post Job

The company can post jobs by entering:

- Job title
- Description
- Required skills
- Experience level
- Salary range
- Location
- Job type

7.4 AI Job Description Support

If the company provides only the job title:

- The system can generate the job description automatically.
- The AI can suggest required skills and experience.

7.5 Applications Tab

The applications tab shows:

- Candidate name
- Resume

- ATS score
- Mock interview score
- Application status
- Interview progress

Applications can be filtered by:

- Status
- Score
- Experience
- Match percentage

---

8. Application Flow and Notifications

8.1 Application Process

When a candidate applies:

- The application is stored in the database.
- The company receives a notification.
- The candidate gets confirmation.

8.2 Notification Methods

The system sends notifications through:

- Dashboard notification
- Email notification
- Push notification if enabled

8.3 Notification Content

The notification includes:

- Candidate name
- Job title
- Resume link
- ATS score
- Confidence level
- Date and time of application

---

9. Interview Scheduling

9.1 Schedule Interview

When a company shortlists a candidate:

- The company can schedule an interview.
- The company selects date and time.
- The company selects interview mode.

9.2 Interview Modes

The interview can be:

- In-person
- Google Meet
- Zoom

9.3 Meeting Link

If the interview is online:

- The system auto-generates a meeting link.
- The candidate receives the meeting link.
- The candidate receives interview details.

9.4 Candidate View

The candidate can see:

- Interview date
- Interview time
- Interview mode
- Company name
- Job title
- Meeting link
- Preparation tips

---

10. Interview Decision and Feedback

10.1 Interview Status

After the interview, the employer selects one of these statuses:

- Approved
- Rejected
- In Progress

10.2 Approved

If approved:

- Offer details are shown.
- Salary
- Joining date
- Documents required
- Candidate can accept or reject the offer

10.3 Rejected

If rejected:

- The company fills rejection reasons.
- Optional comments can be added.
- AI converts the feedback into professional wording.
- Candidate receives the feedback.

10.4 In Progress

If more rounds are needed:

- The status becomes In Progress.
- Next round details are shown.
- Candidate gets preparation tips.

---

11. Company Rating and Response Incentive

11.1 Rating System

Each company has a public rating based on:

- Response speed
- Interview scheduling consistency
- Candidate feedback

11.2 Purpose

- High-rated companies are shown more prominently.
- Low-rated companies are shown lower.
- This encourages companies to respond quickly.

11.3 Badge System

The platform may show:

- Star rating
- Active hiring badge
- Slow response warning

- High response badge

---

12. Admin Dashboard and Job Management

12.1 Admin Functions

The admin can:

- Manage users
- Manage companies
- Manage jobs
- Handle platform settings
- View reports
- Control visibility of data

12.2 Admin Dashboard Modules

- User Management
- Job Management
- Reports and Analytics
- Settings
- Notifications

12.3 Analytics

The admin can view:

- Total users
- Total companies
- Total jobs
- Total applications
- Active users
- Growth reports

---

13. Manual Job Posting by Admin

13.1 Add Job

The admin can manually add jobs with:

- Job title
- Description
- Skills

- Experience level
- Salary
- Location
- Job type

13.2 Job Association

The job can be linked to:

- A specific company
- A platform-managed job

13.3 Job Visibility

After saving:

- The job appears in candidate recommendations.
- The job appears in the all jobs list.
- If linked, it also appears in the company dashboard.

---

14. Bulk Job Posting Using CSV

14.1 CSV Upload Flow

The admin can upload many jobs at once using CSV.

14.2 Steps

1. Download sample CSV template.
2. Fill job data.
3. Upload the file.
4. System validates each row.
5. System shows valid and invalid rows.
6. Admin confirms import.
7. Valid jobs are inserted into the system.

14.3 Use Case

This feature is useful for:

- Campus placements
- Internships
- Government jobs
- Bulk hiring campaigns

---

15. Billing and Subscription System

15.1 Free Plan

The Free plan has limited access:

- Resume analysis: 3 per month
- Job search: 5 per month
- Mock interview: Demo only
- AI suggestions: Basic
- Job alerts: Not available
- Portfolio analyzer: Not available

15.2 Premium Plan

The Premium plan includes:

- Unlimited resume analysis
- Unlimited job search
- Full mock interview access
- Advanced AI suggestions
- Daily job alerts
- Daily email reports
- Portfolio analyzer

15.3 Premium Plan Table

Feature	Free Plan	Premium Plan
Resume Analysis	3 times per month	Unlimited
Resume Re-analysis	Limited	Unlimited
Job Search	5 searches per month	Unlimited
AI Mock Interview	Demo only	Full coaching
Practice Mode	Available	Available
Official Mode	Limited	Unlimited

AI Suggestions	Basic	Advanced and detailed
Recommended Jobs	Limited	30 or more curated jobs daily
Email Reports	Included	Daily
Portfolio Analyzer	Not available	Included
Job Alerts	Not available	30 daily alerts
Priority Support	Not available	Available

15.4 Payment Flow

1. User clicks Upgrade.
2. Payment page opens.
3. User pays by UPI, card, or other supported methods.
4. Payment is verified.
5. Premium access is activated.

15.5 Usage Tracking

The system tracks:

- Resume analysis count
- Job search count
- Interview usage
- Premium subscription status

---

16. Use Cases

16.1 Candidate Use Case

- Candidate registers.
- Candidate completes resume.
- Candidate runs AI analysis.
- Candidate practices mock interview.
- Candidate takes official interview.
- Candidate gets job recommendations.

- Candidate applies to jobs.
- Candidate receives interview feedback.

16.2 Company Use Case

- Company registers.
- Company activates Hiring Mode.
- Company posts jobs.
- Company reviews applications.
- Company schedules interviews.
- Company gives feedback.

16.3 Admin Use Case

- Admin manages users.
- Admin manages jobs.
- Admin uploads bulk jobs.
- Admin checks reports.

16.4 Super Admin Use Case

- Super Admin tracks revenue.
- Super Admin manages premium data.
- Super Admin views global reports.

---

17. Non-Functional Requirements

17.1 Security

- Passwords must be encrypted.
- OTP must be used for verification.
- Role-based access must be enforced.
- Login sessions must be secure.

17.2 Performance

- The system should handle many users at the same time.
- Pages should load fast.
- AI analysis should respond quickly.

17.3 Usability

- The platform should be responsive.
- Buttons and labels should be clear.

- The user flow should be simple.

17.4 Data Privacy

- Users should be able to view their personal data.
- Users should be able to delete their personal data.
- Sensitive data should be stored safely.

---

18. System Workflow

18.1 Candidate Workflow

1. Register and login.
2. Complete resume.
3. Run AI resume analysis.
4. Practice interview.
5. Take official interview.
6. View recommended jobs.
7. Apply to jobs.
8. Attend interview.
9. Receive feedback.

18.2 Company Workflow

1. Register and login.
2. Activate Hiring Mode.
3. Fill company profile.
4. Post jobs.
5. Review applications.
6. Shortlist candidates.
7. Schedule interview.
8. Mark result.
9. Send feedback.

18.3 Admin Workflow

1. Login to admin panel.
2. Manage users.
3. Manage jobs.
4. Upload CSV jobs.

5. View analytics.
6. Track reports.
